

Companies are moving to become more flexible and more mobile. Never before have we seen such a strong demand for automation, remote office, real-time visibility, system integration, etc. It highlights the need for an adaptable Enterprise Resource Planning (ERP) system that connects people, processes and technologies in your business.

To ensure business continuity, companies looking to implement ERP system must consider them in the context of your specific business case. It can be tricky since the risks involved can be paramount. Are you aware of these risks? How can you manage these risks to stay ahead of the game? Join our webinar where our experts shares their views on potential risks based on their years of experiences in planning and implementing ERP system for well-known organisations.

Key discussion points:

Potential risks when implementing an ERP project

Case study on mitigating ERP risks
